

AMISEQ

Intelligent Automation

Intelligent Automation at Amiseq Inc. is all about getting your organization across the barriers of old-school automation that is invasive, time consuming and high cost. We can assist you in digital transformation initiatives that helps in achieving growth that positively impacts your customers and investors.

Extend your thinking beyond traditional Automation

High value of work exists between automation and business operations in reality. Every day, organizations are challenged with the increase in the volume of mundane manual tasks. This has a direct impact on operations. RPA at the early stages works by replicating human actions in a system/process that follows predefined rules without any room for error. RPA could remove or reduce the mundane tasks from your human capital and improve productivity, in certain cases, by assisting them in specific areas. RPA bots (Software) become your digital workforce that are ready to be scaled up/down based on business needs without having to spend on recruiting, onboarding, training etc.,

Advanced level of RPA that brings in the ability to make judgment-based decisions, think/predict and learn from human behavior. You do not need to get stuck in legacy systems or stand-alone applications in your organization anymore. RPA can help you fast-track your digital transformation agenda.

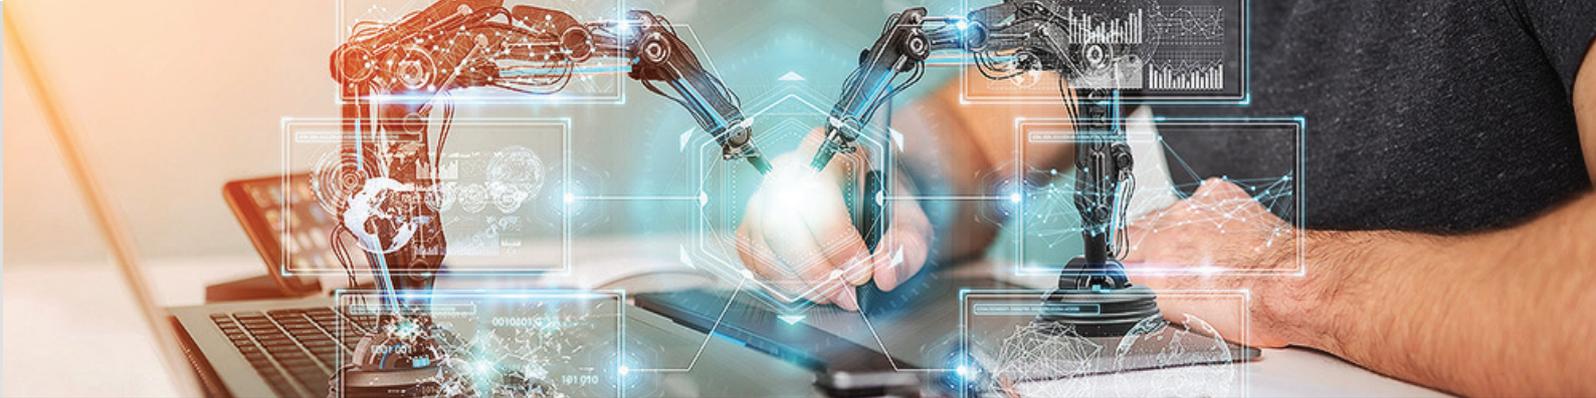

Few areas of application to highlight

- ▶ Data extraction from forms (printed/handwritten) and further processing it
- ▶ Reconciliation processes
- ▶ Invoice Processing
- ▶ Intake Process
- ▶ Incident Management
- ▶ Compliance management and tracking
- ▶ and many more...

Let's get you ahead

- ▶ Does any of your business divisions do mundane repeated tasks?
- ▶ Are your teams spending more time on manual reconciliation of data?
- ▶ Are you stuck with optimized productivity and quality of work?
- ▶ Are there more rule based actions involved in the work than human decision making?
- ▶ Is your pace on digital transformation obstructed by legacy system?

If you have answered yes to any one of the above then, there is a high chance that RPA can help you fast track your digital transformation agenda.

Outcomes

- 1 Improve quality and accuracy
- 2 Reduce Human Intervention
- 3 Reduce cost
- 4 Improve speed of processing
- 5 Scalable & Flexible Digital workforce in order to handle volume spike
- 6 Quick implementation

We are excited to assist you in the digital transformation initiatives by understanding your business needs and help you in an Intelligent Automation journey that is uniquely crafted and curated for your needs.

Our Services
